

P&S

LightSense™ — sophisticated lighting control
without the complexity or high costs.

■ THE ONE THAT WORKS FOR YOU®

 **legrand®**

Set the scene.

Once, the only way you could achieve perfect lighting for any time, situation and place in your home was by individually switching and dimming fixtures and lamps. Then going through the process again and again, every time your lighting needs changed.

Now P&S LightSense™ Controls make perfect lighting so intuitive, it seems to read your mind. At the touch of a button, you can command any lighting design — whether it's for an intimate group of lights, multiple lights in a larger area, or a diverse array of lights throughout your home.

Thanks to P&S LightSense, setting the perfect lighting scene in a room, a group of rooms, or an entire house has never been this easy and convenient.

The advantage of controls that remember your favorite scenes.

P&S LightSense Controls use two-way radio-frequency (RF) transmission to communicate with one another. With simple, effective electronic intelligence built into every device, there's no need for a costly central control system such as a computer. And because the controls don't need to be connected by added control wiring, installation is just like that of traditional switches and dimmers: quick and economical.

This approach makes P&S LightSense Controls extremely versatile and easily configurable to match your needs and preferences. A P&S LightSense installation can be as simple as being able to dim a dining room chandelier from two or three locations — or as sophisticated as operating many lights throughout your home from your bedside table. And that's not all — P&S LightSense can do much more!

This **P&S LightSense Room Scene Controller** enables you to easily program up to five different scenes for a room or area — and select any of them at a single touch. You can also brighten or darken any scene temporarily, without changing your scene programming. This same simple (but powerful) control is yours in P&S LightSense handheld remotes.

The power of P&S LightSense™
what smarter control can do.

[EVENING]

Make transitions with style.

There's a perfect lighting scene for any activity, and, with P&S LightSense, you can select it instantly. Lights fade up to the levels you've selected...fade to different levels if you choose another scene...and fade off when they're no longer needed. Those smooth fades make life much easier for light bulbs — so they'll last longer.

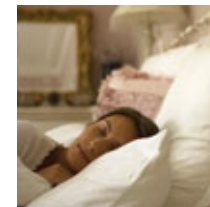

It takes just two **P&S LightSense Dimmer** models to handle most types of lighting: an incandescent model for fixtures using only traditional incandescent bulbs, and a universal model, which dims incandescent, magnetic low-voltage, and dimmer-compatible fluorescent fixtures. **P&S LightSense Multilocation Controllers** enable basic dimming control from more than one spot.

Control lighting — and more.

P&S LightSense puts you in easy command of anything that can be controlled by a wall switch. Or a dimmer. Or a ceiling fan speed control. It can also control plug-in lighting and small appliances — including floor or table lamps, a coffee maker, or a fountain.

With **P&S LightSense Fan Controls**, you can select any of four ceiling fan speeds using the control itself — or P&S LightSense Room or Whole-House Scene Controllers. Built-in de-humming ensures quiet fan operation.

Let you stay in bed.

Forget to set your lighting before turning in? Relax. Touch a button on a P&S LightSense remote, and the lights in your house will do exactly what you want them to do.

Respond to the unexpected.

Something went “bump” in the night? If you're concerned, just touch the “Panic” button on your bedside P&S LightSense remote, and your house responds just the way you told it to. It will flash lights and provide peace of mind.

With a **P&S LightSense Whole-House Remote**, you can command lighting from anywhere in your home.

You can control table lamps, small appliances, small motors, and more with these **P&S LightSense Plug-In Lamp and Appliance Modules**.

Make it look like you're home — when you're not.

You're going on vacation — but you want your home to look occupied while you're away. P&S LightSense™ makes it happen with remarkable realism. That's because it can memorize how you've used your lights for the past week — and continuously "replay" that week until you return. No timers to set. No need to adjust for different seasons. Just touch one button when you leave. Touch any P&S LightSense Control when you return to end the "replay."

Big house? No problem! A **P&S LightSense Repeater** adds 100 feet of range to your P&S LightSense system. It also makes your home appear to be occupied while you're away in the most realistic way possible, by basing its automatic lighting operation on your actual use.

Dim the lights automatically in your home theater by using the interface.

A **P&S LightSense RS232 Network Controller** provides seamless integration with RS232-compliant home theater systems, computers and other devices.

Take direction easily.

P&S LightSense Controls are smart students. Teaching them what you want them to do is remarkably easy.

Remember your instructions through power outages.

If the power goes off, P&S LightSense Controls won't forget your programming. In fact, when power returns, your lights will come back on to exactly the same levels you'd chosen before the outage.

For controlling lights that don't need dimming, a **P&S LightSense Switch** is the perfect choice. Its ON/OFF operation can be included in scene programming for one-button selection via P&S LightSense Room and Whole-House Scene Controllers.

Accept change gracefully.

Want to fine-tune a scene? Add or remove a lamp? P&S LightSense makes changes simple. You can alter any control's setting in moments — without affecting any other control that's part of the scene. You'll find programming LightSense controls is very similar to storing station selections on your car stereo.

P&S Screwless Wall Plates provide an elegant look to match the elegant function of P&S LightSense Controls — perfect for every room in your home!

To provide a perfect match for any décor, P&S LightSense Controls are available in white, black, light almond, and ivory. Want to match the appearance of P&S LightSense Controls in standard, non-radio-frequency switches, dimmers, and fan speed controls? No problem, we have them.

Welcome you home.

When you pull into your driveway at night, wouldn't it be nice to turn on your home's lights from your car? With P&S LightSense, it couldn't be easier.

Touch one button on a **P&S LightSense Key Fob Controller**, and walk into a fully lighted home. Or, if you prefer, have your lights come on automatically when you open your garage door. A **P&S LightSense Scene Interface** can evoke scenes in response to signals from garage door openers, occupancy sensors and other devices.
